

Coatings & Adhesive Removal

Ridding your floors of previous coatings and coverings can be a big task. Before installing a new floor or resurfacing an existing floor, you may need to remove carpet glue, tile mastic, tile mortar, paint, epoxy coatings or other coverings.

TTM Finishes can help. We have extensive experience in removing adhesives and coatings. Material such as an epoxy coating can be removed, leaving behind a clean concrete floor, ready for new coatings to be applied.

Features & Benefits:

- Can remove any type of coating and adhesive material
- Easy solution to otherwise labour intensive work
- Provides a clean and level surface for new flooring products
- Cost effective and fast

Left: Grinder used to remove old epoxy coatings prior to new tile being applied.

Right: Clean concrete floor revealed after the removal of VCT mastic adhesive.
