

Crack Chasing & Joint Filling

When repairing cracks on factory and warehouse concrete floors, it's important that cracks be properly chased and filled. Improper repair can lead to further cracking problems to existing concrete floor slabs. We carry out repairs that are a fast, affordable and permanent solution to your concrete cracking problems.

We also have tools and materials to handle your joint filling requirements. Whether your specifications call for epoxy or polyurea joint filling materials, we make sure your floor joints are properly prepped filled and sealed in accordance with your business needs.

Features & Benefits:

- Controls spread of existing concrete cracking conditions
- Provides a fast, affordable and permanent solution
- Durable Epoxy and Polyurea joint materials available
- Experience with a large range of Epoxy & Polyurea joint fill materials

Cracks being filled and patched after completion of crack chasing work to prep cracks on older concrete floor.
