

Sandblasting

Sandblasting is an effective method of cleaning and preparing surfaces for refinishing. At TTM Finishes we can assist you with your next project with the newest technology in portable sandblasting, slurry and abrasive blasting systems available.

These blasting methods can be used to gently clean brick and wood surfaces or more aggressively strip metal and concrete surfaces of existing rust, paint, dirt and contaminants to prepare them for new high performance coatings.

Features & Benefits:

- Removes rust, scale, paints, stains, glues grease and dirt
- Rejuvenates base material for surface finishing
- Prepares surfaces for painting and refinishing
- Large variety of abrasive media available including, recycled glass, aluminum oxide, garnet, jet mag, black beauty, white lightning, walnut shells, and corn cob

Left: Rusted and peeling metal ceiling deck in factory being sandblasted.
Centre: Abrasive blasting to remove gum and dirt from concrete walkway.
Right: Rusted metal fence surface being sandblasted to prep for painting.
