

Machinery and Equipment Painting

Manufacturing contracts are often awarded to businesses based upon a number of factors including the inspections of their production and manufacturing facilities. Housekeeping and maintenance functions are important to keeping your facilities looking respectable and presentable to clients.

Machines can be thoroughly cleaned and washed with solvent or stripped and sandblasted if necessary in order to repaint them entirely or just repaint sections or safety parts and guards as required. For companies involved in the sale or resale of industrial manufacturing equipment, we can provide onsite cleaning and spray painting services using the latest in high performance paints and epoxy coatings as specified.

Features & Benefits:

- Improve the look and appearance of existing plant and equipment.
- Improve opportunity for contracts and certification.
- Onsite cleaning, stripping and blasting of equipment.
- Onsite spray painting of high performance epoxy and urethane coatings.

Left: Spot sandblasting of rusty areas on equipment.
Centre: Painting of medical press equipment for Macro Engineering.
Right: Spraying of automotive manufacturing equipment in epoxy coatings.
