

# Moisture Control

TTM Finishes can help you overcome excessive moisture vapor emissions that can be found in new or existing concrete floors. We are trained and certified installers of Ardex Moisture control systems.

Moisture control is achieved through the use of an epoxy moisture management system targeting existing concrete floors that contain excessive moisture levels. After application of epoxy coating products the floor is then topped with a layer of Ardex concrete topping to provide you with a level, smooth and suitable surface for your installation of final flooring materials.

## Features & Benefits:

- Eliminate floor staining, disbonding, curling and adhesive breakdown caused by excessive moisture
- Moisture controls system comes with a comprehensive warranty program
- Ardex trained and certified Moisture Control system installers
- Fast installation and quick return to service
